Summary

Full stack software engineer with proficiency with Node Js, Python and React acquired through project-based learning. Seeking opportunities to build and maintain software.

Developer Skills

Languages:	JavaScript, Python, HTML & CSS, SQL
Frameworks:	Express JS, Flask, React JS, Unittest, Jasmin, Jest, Bootstrap, jQuery
Tools:	Git, GitHub, Axios, Unix Commands, Heroku, IDEs

Projects

	GitHub Repo | Deployed App
Shopper 2020	Shopper is a full-stack e-commerce app I built using Express Js and Postgres to design the backend API and the database. I designed the frontend using React Js and styled using CSS. All HTTP request and communication with the remote API and the backend API are done asynchronously using Axios.
	GitHub Repo | Deployed App
Word-search 2020	Word-search is a dictionary app I built using Flask, Vanilla JS, Postgres & SQLAlchemy and CSS for styling. It aims to assist English language students to search for definitions and keep a list of new words.

Education

Springboard: Software Engineering Career Track March – November 2020	• + 700 Hours of hands-on material. • 1:1 industry expert mentoring oversight. • Completion of four full-stack portfolio projects.
Sudan University of Science and Technology, BSC in M.I.S. September 2011 – June 2016	• Completed a bachelor's degree in management information systems.
